

# PERSONNEL SAFETY NET ASSEMBLY AND INSTALLATION

## Safety Net Deployment

**Note:** Safety Nets should be drawn back against the building and tied off during times of excessive ice, snow or wind loading, and only when not in use.

**Note:** The Tag lines are used only to deploy and retrieve the Net Arms and are not used for system support.

Leave slack in the tied off Net Arm Tag Lines after deploying the Safety Net System.

**Caution:** Net Arms are held at a maximum of 45°. The strength and function of the system will be compromised beyond this point. Check all system dimensions and make any necessary adjustments.
